

MCPs in Plain English

Why should you care?

1

Encrypts web traffic for secure online interactions.

HTTPS

**Secure
Communication**

2

Protects AI app communications from unauthorized access.

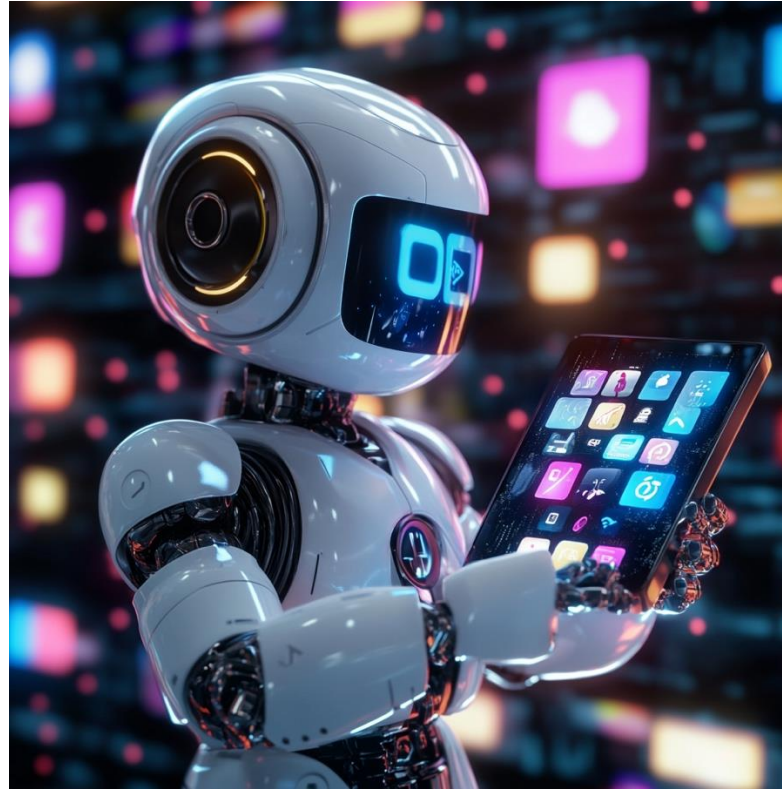

MCP

What does it stand for?

Referred to both as “**Model Context Protocol**”, sometimes also called “**Multi-Context Protocol**”

In one sentence, what is it?

MCP works like a **universal translator** that lets AI assistants **communicate with all** your digital tools and apps, allowing them to access your information and perform tasks across your entire digital world

Why is it needed?

We started with purely LLM interactions...

Write me a job description for a new engineer

You got it, here's a job description:

designs, develops, and optimizes systems and processes to solve technical challenges while collaborating with cross-functional teams to drive innovation and efficiency.

Why is it needed?

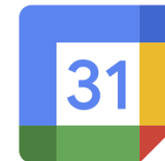

And then LLMs could call tools (manually)...

I want to speak to someone asap

LLM: I can't do that, but my tools might?

Call manually setup tools for reinforcement...

Relevant Tool Called

Why is it needed?

And now LLM can call a server that can call those tools (automatically)

I want to book an appointment and receive a reminder

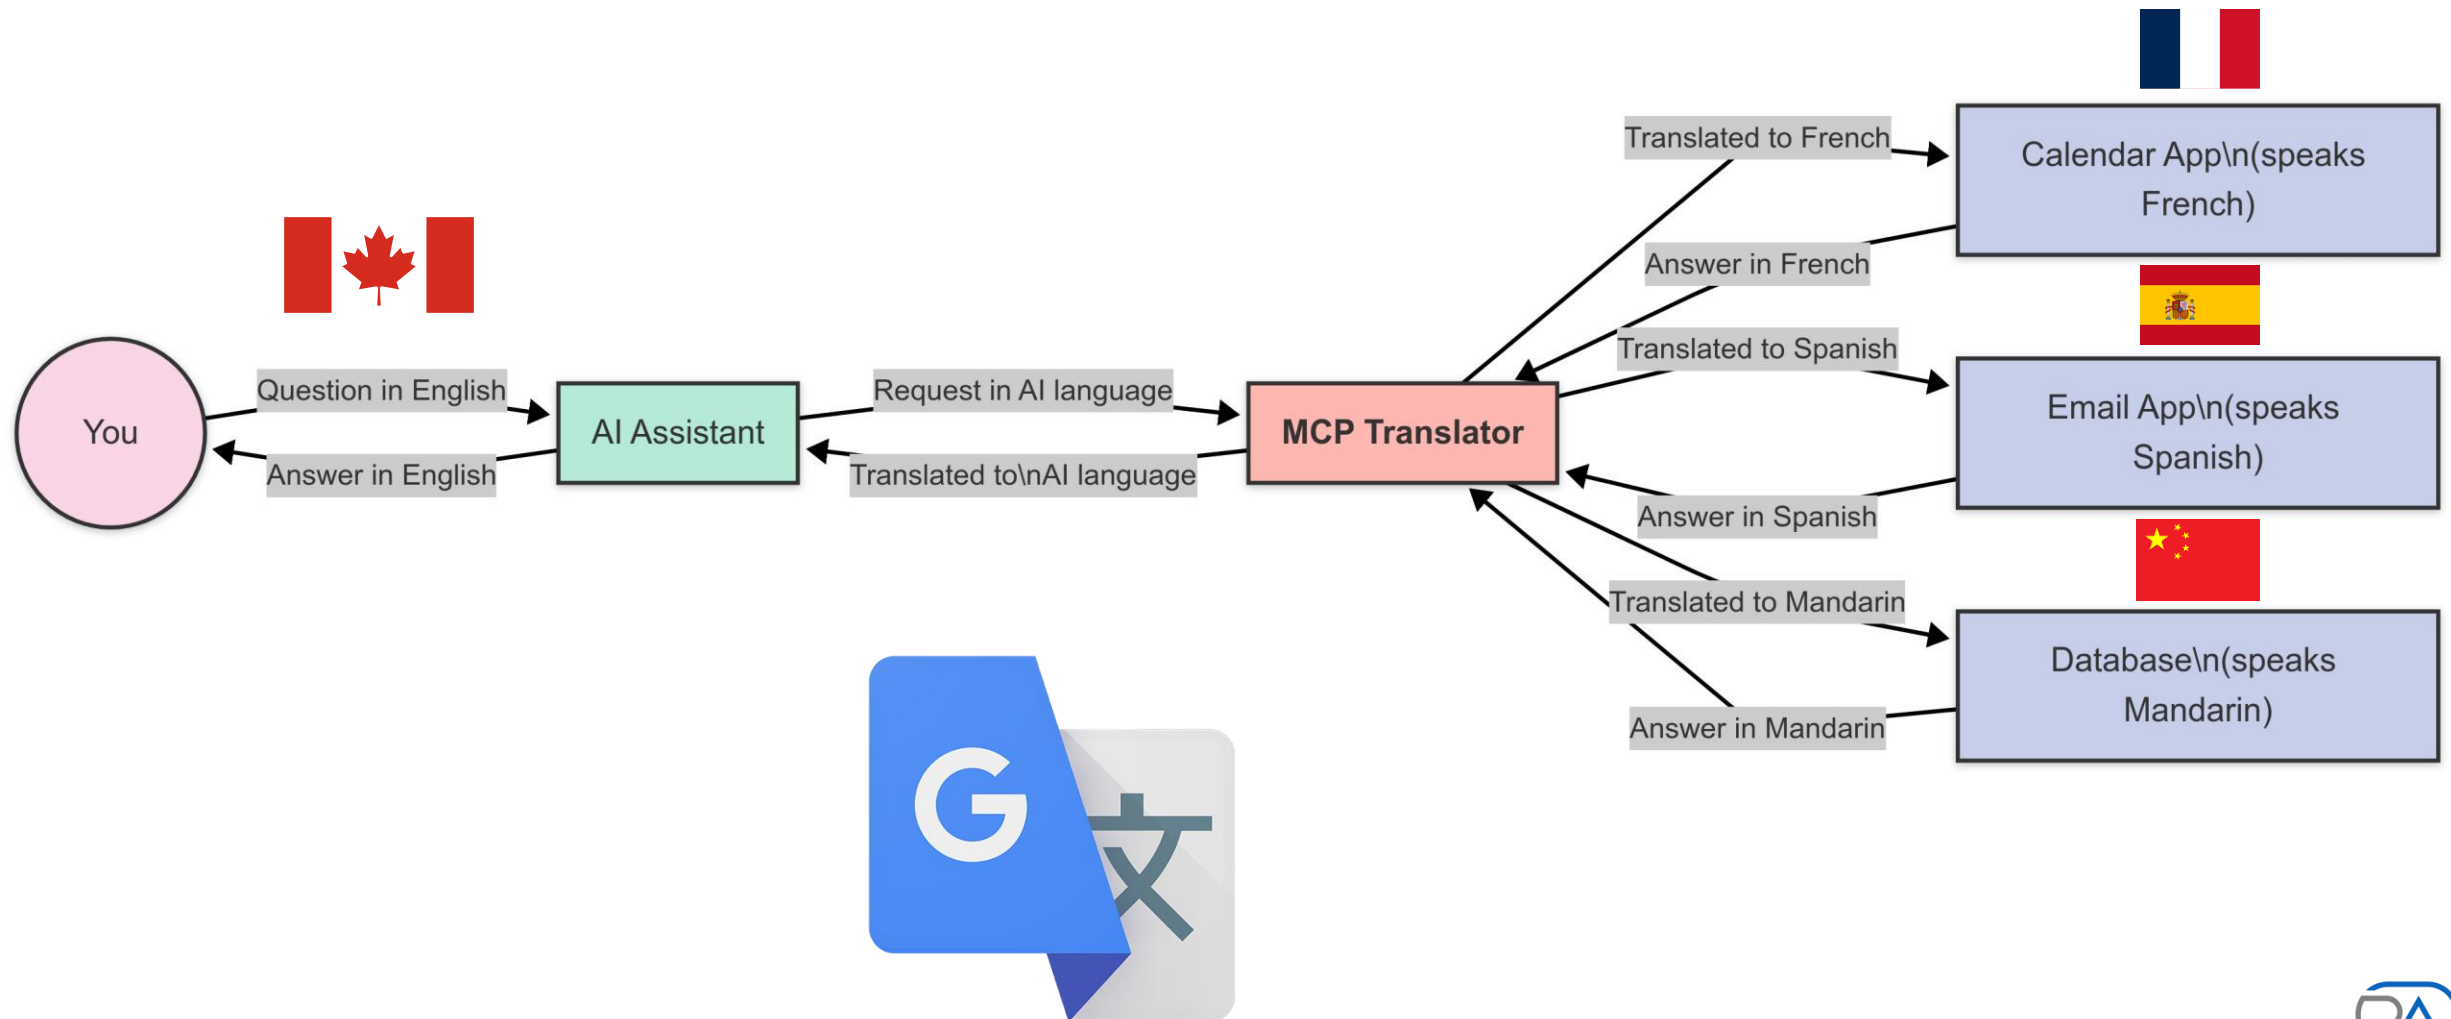

LLM: I can't do that, but my server might?

Calls MCP server

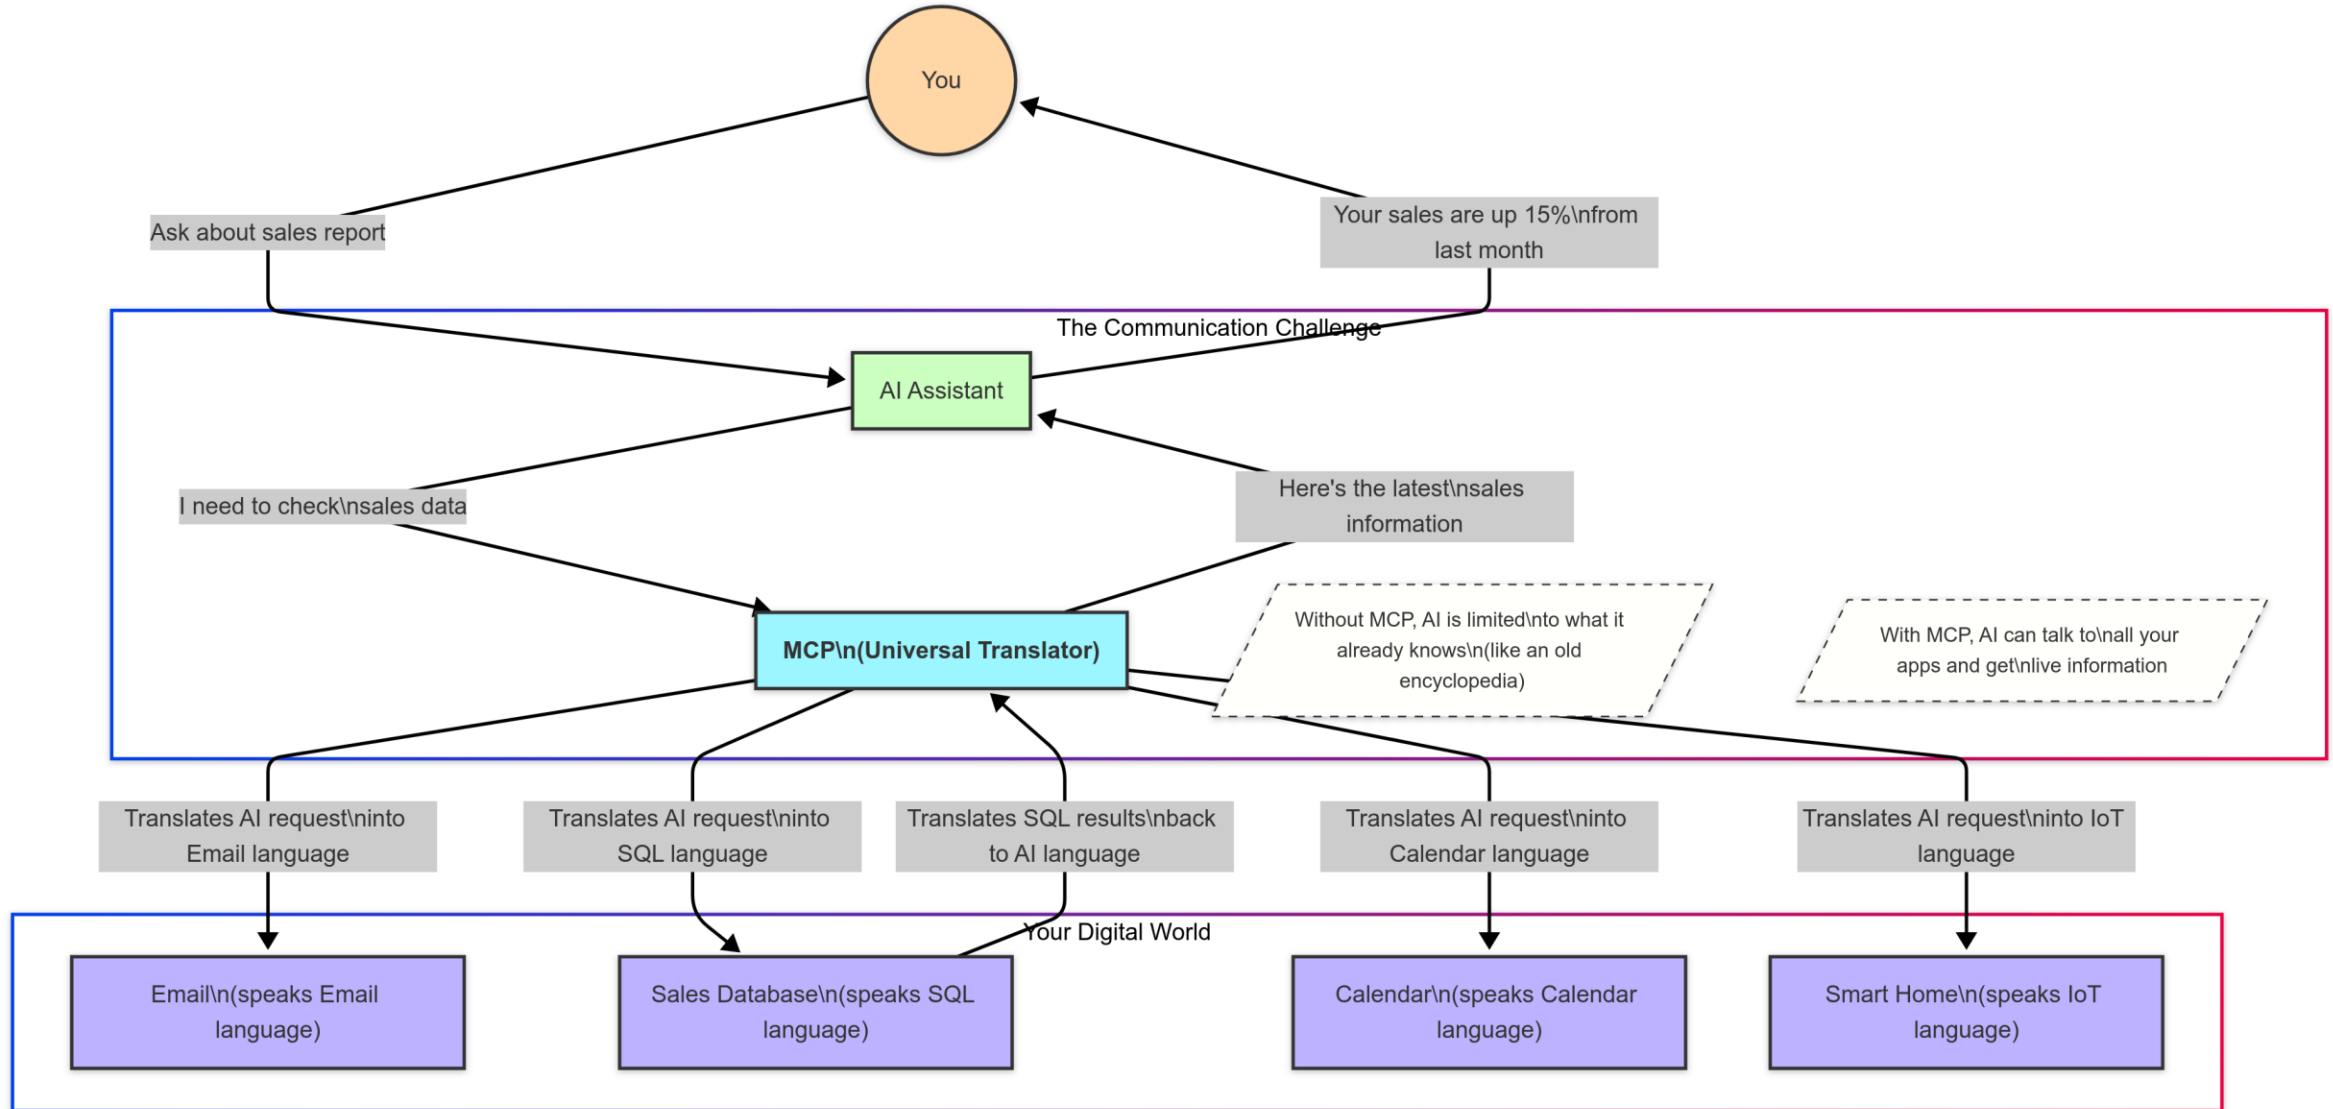

Relevant Tool Called

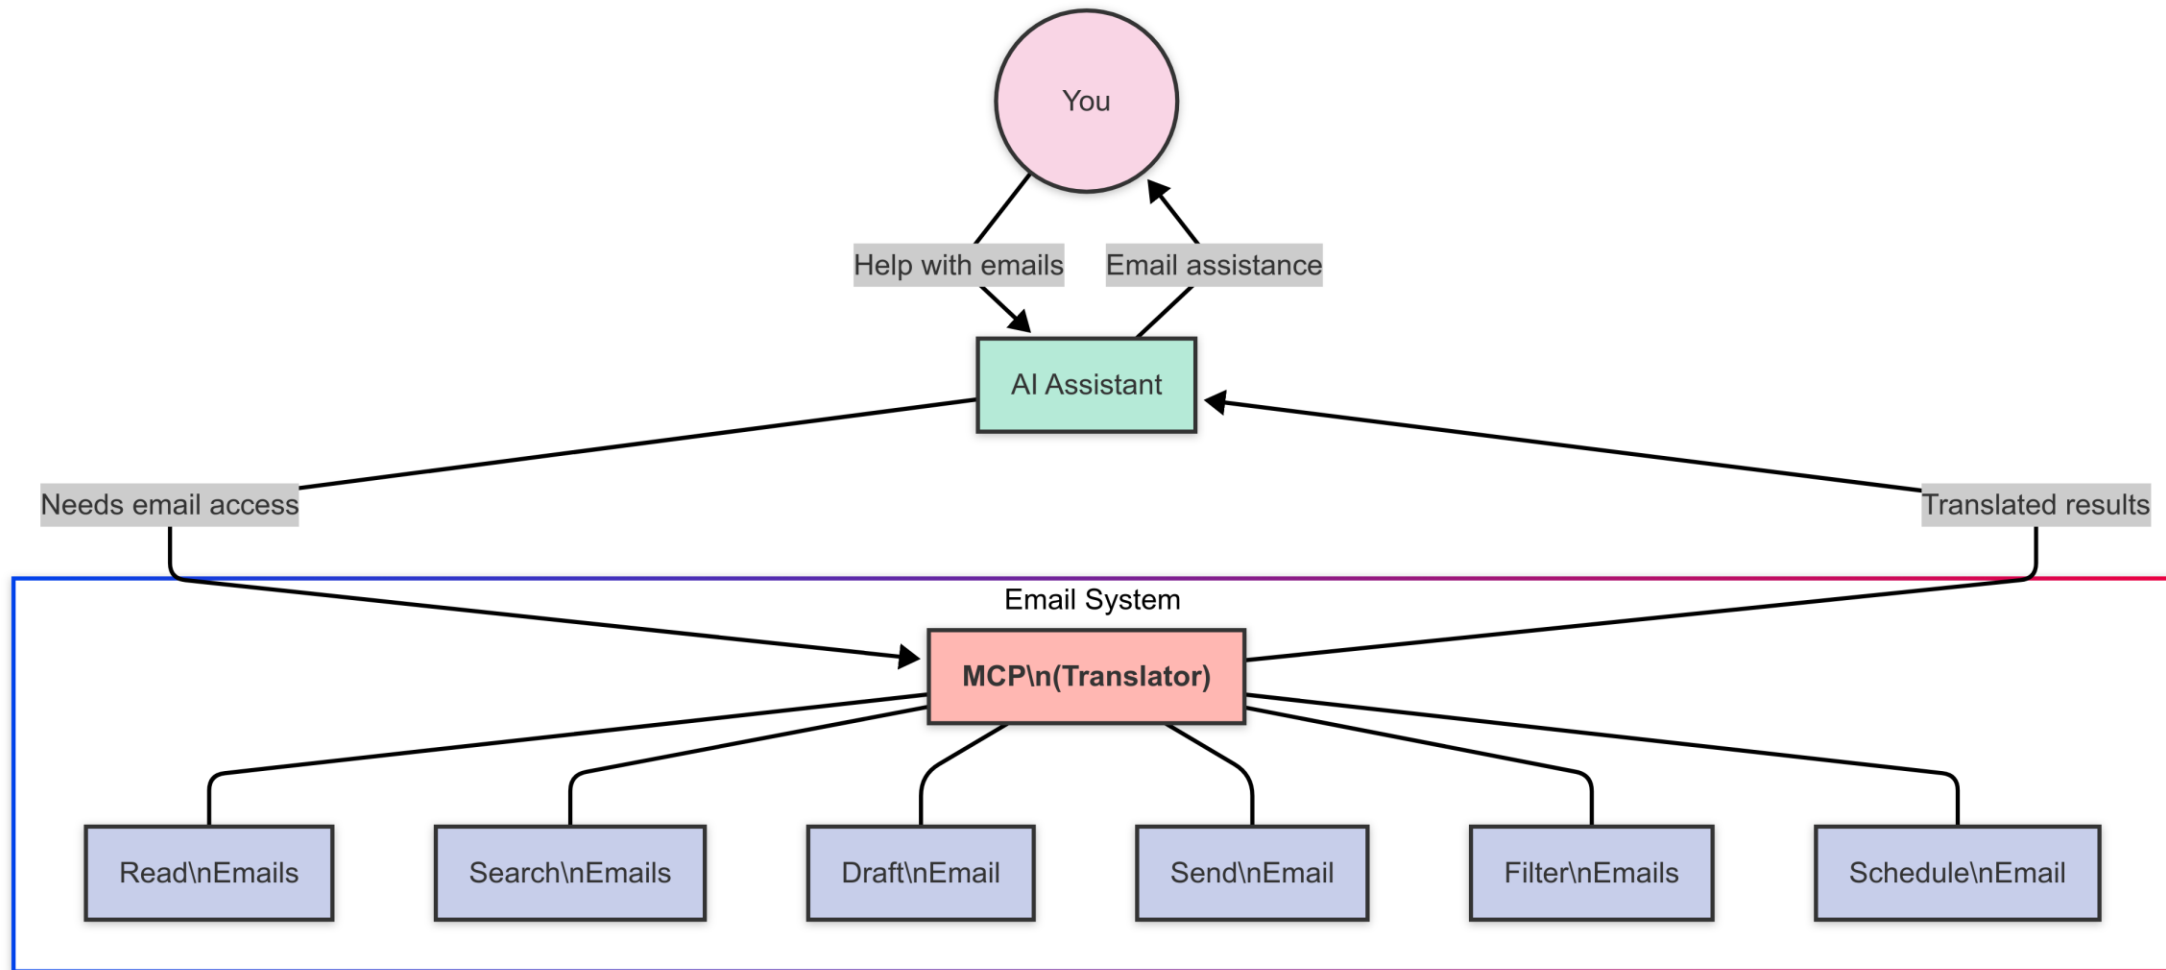

How does it work? (super high level)

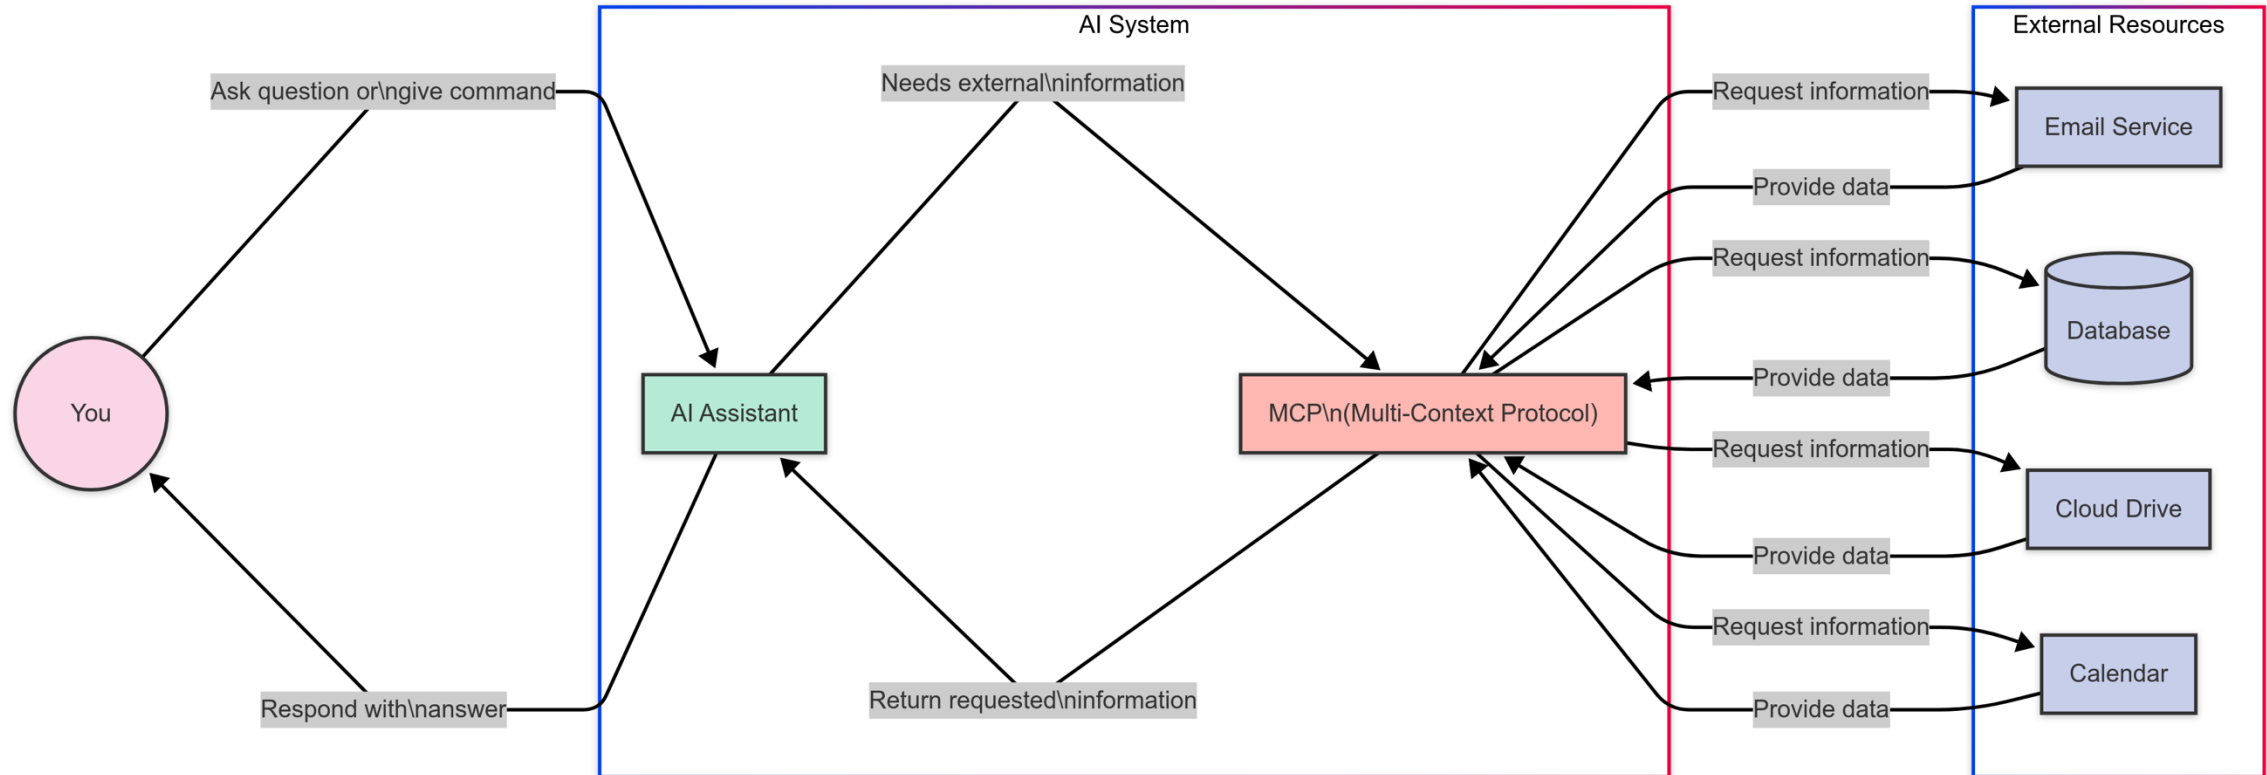

How does it work? (medium level)

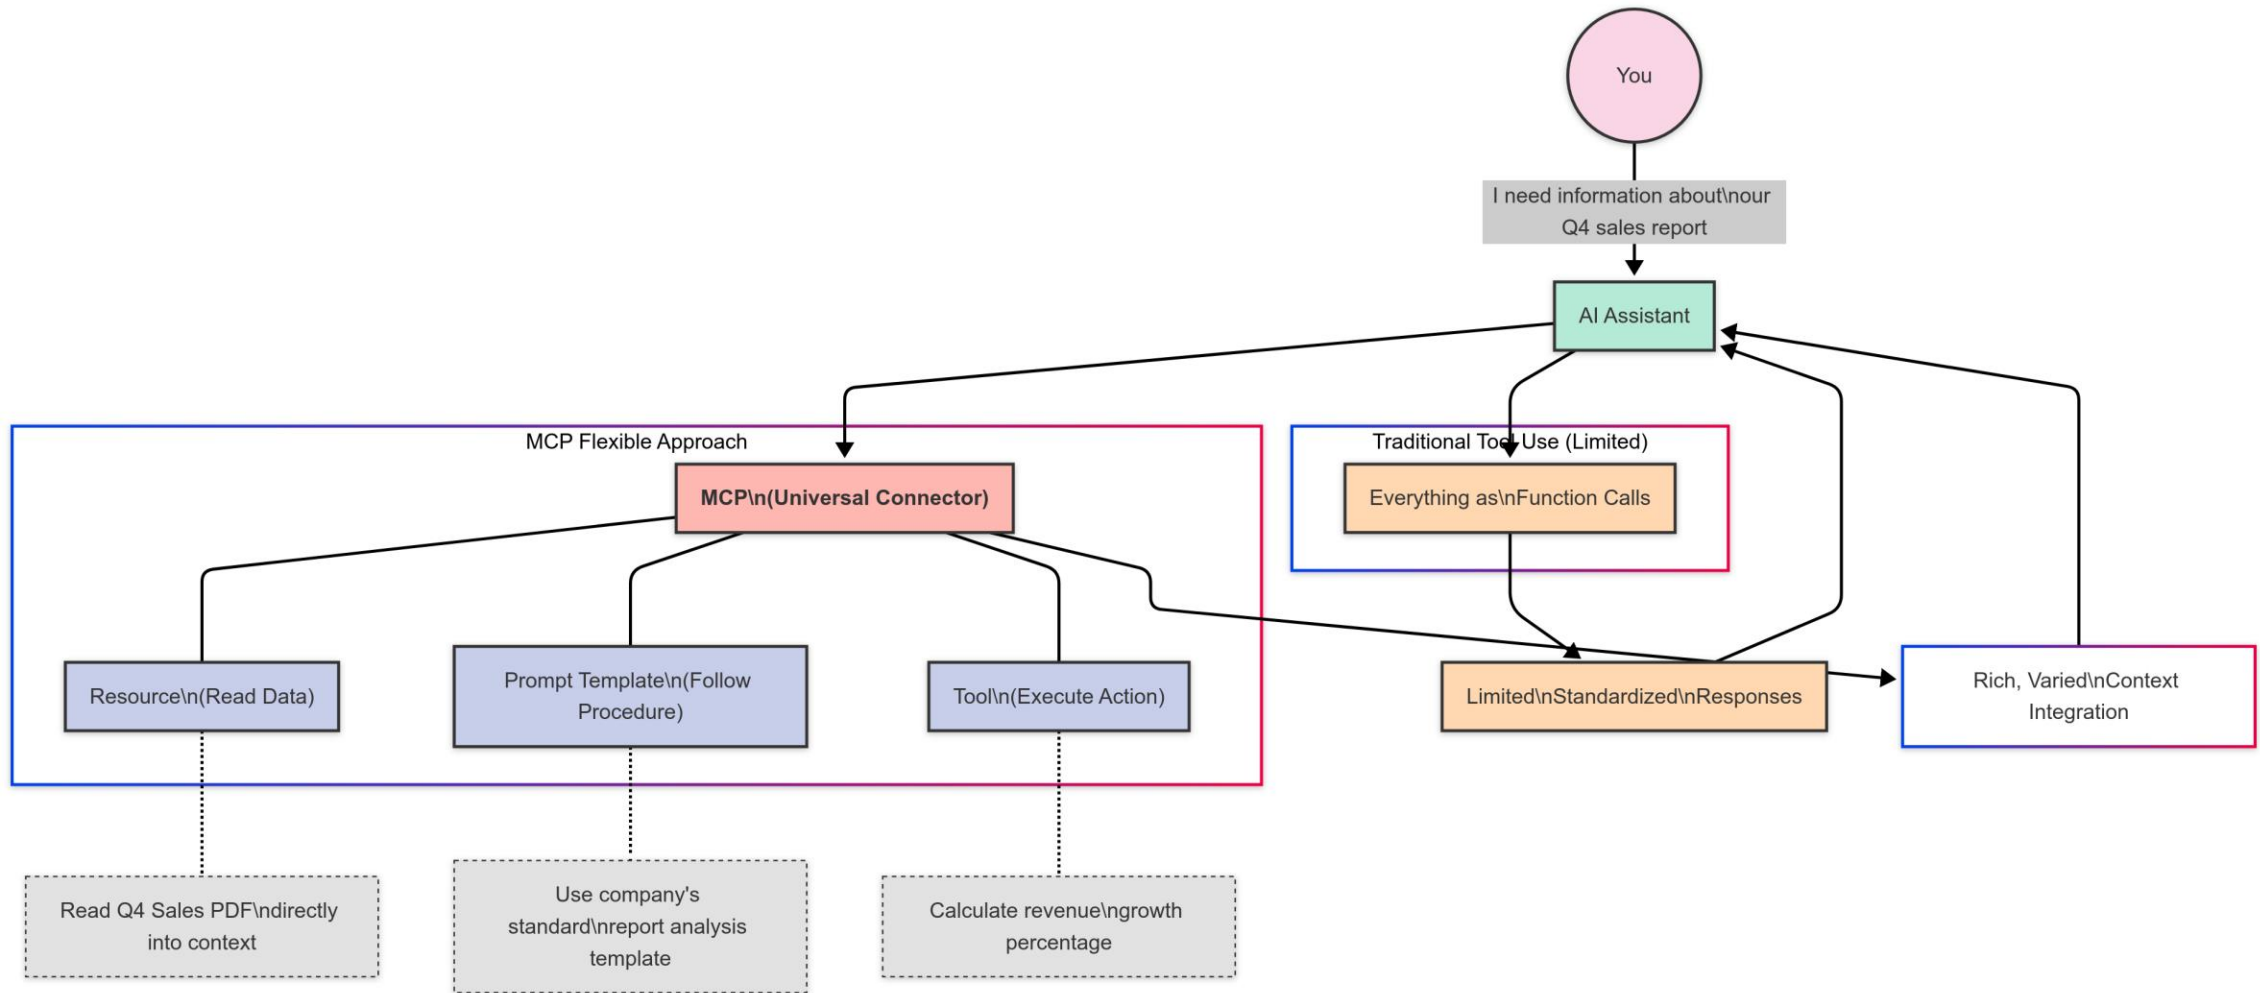

How does it work? (lower level)

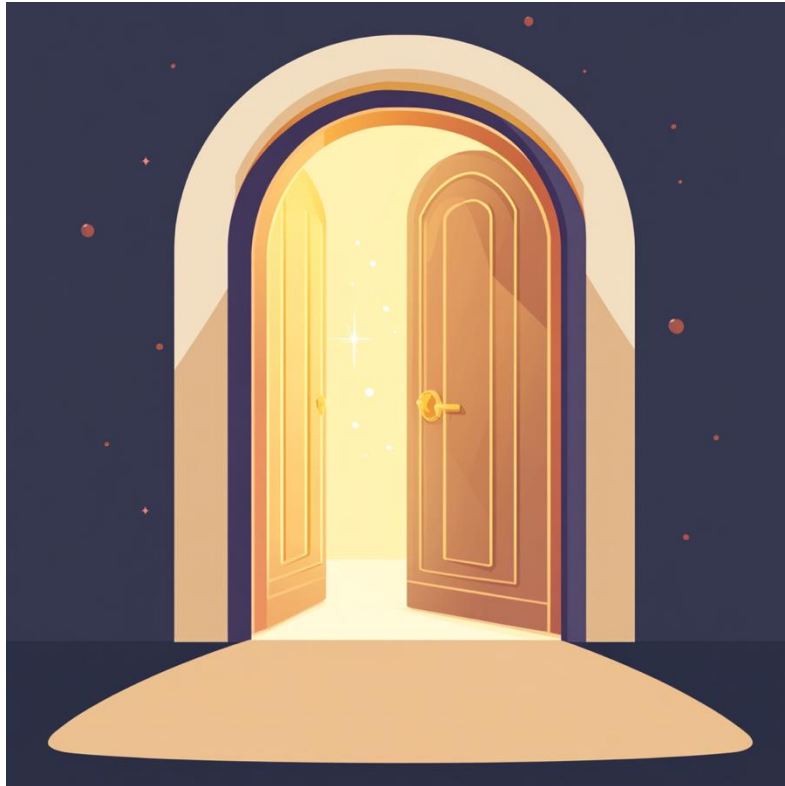

Tools give **one-way** traffic, MCP gives **two-way**

Where does the 'Multiple Context' come in?
