

# Testing Buffet

## Factuality

Check if the content is factually accurate.

## Semantic similarity

Compare generated text to the reference.

## Custom prompt

Create a test criteria by writing your own custom prompt.

## Sentiment

Identify the emotional tone of the model's response.

## String check

Check if model's response includes specific string(s).

## Valid JSON or XML

Check if model's response is valid JSON or XML.

## Matches schema

Ensure model's response follows the specified structure.

## Criteria match

Assess if model's response matches your criteria.

## Text quality

Assess response quality with Bleu, Rouge or Cosine algorithms.

Model's response

Select...

Reference

Select...

Passing grade(s)

- ☐ Response is a consistent subset of the reference
- ☐ Response is a consistent superset of the reference
- ☐ Response matches all details of the reference
- ☐ Response disagrees with the reference
- ☐ Response differs from reference, but factual accuracy is unaffected
