

The Realtime API

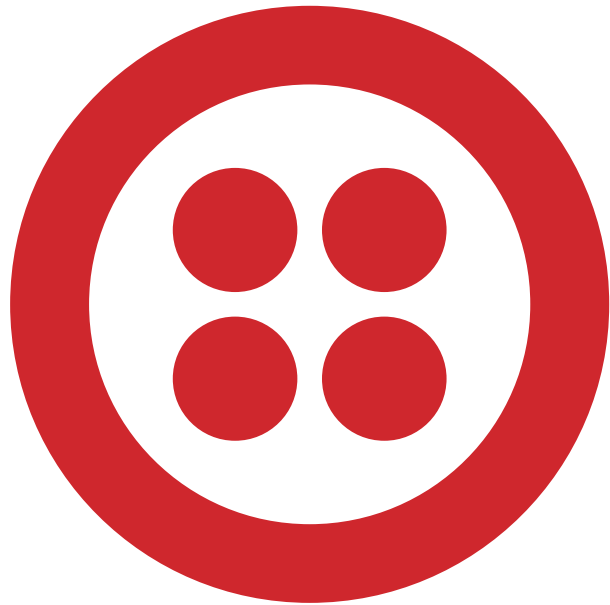

Why should you care about the Realtime API

You can talk to OpenAI, and it'll talk back to you

Because the conversations are 'live', they're quicker

It's one of the only speech-to-speech models

So, what happened?

What's Twilio?

The image shows the Twilio website's hero section for RCS Business Messaging. The background is dark blue with a subtle pattern of binary code. On the left, the Twilio logo is in the top left corner. A navigation bar at the top contains links for Products, Solutions, Developers, Why Twilio, and Pricing. To the right of the navigation bar are a search icon, a 'Contact sales' button, and a 'Start for free' button. The main heading reads 'Get RCS on Twilio Messaging—no code changes required'. Below this, a sub-headline states: 'Establish trust and capture attention with RCS from Twilio Messaging, without additional APIs to integrate and configure.' A blue 'Get started' button is positioned below the sub-headline. On the right side, there is a stack of three overlapping mobile message cards. The top card is from 'OWL Cafe' and says 'Thanks for placing your order. Reply LATTE to get your coupon for 15% OFF your next order.' The middle card is a 'Verified by Google' badge. The bottom card is a 'MESSAGES' card showing a one-time passcode '343-343'. At the bottom of the hero section, there is a row of four white buttons with red arrows: 'Developers', 'Marketers', 'Product Owners', and 'Sales & Support'. A video player control bar is visible at the bottom right of the hero section, showing a pause button and a progress bar.

TLDR; how does this work?

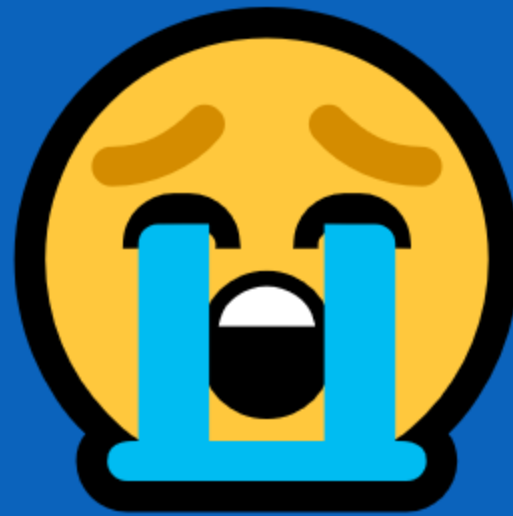

Is it better than existing voice agent platforms?

I don't think so – not ready for showtime.

Reasons: cost, randomness, conversational, control, and cost

YOU: HELP! I don't know how to code

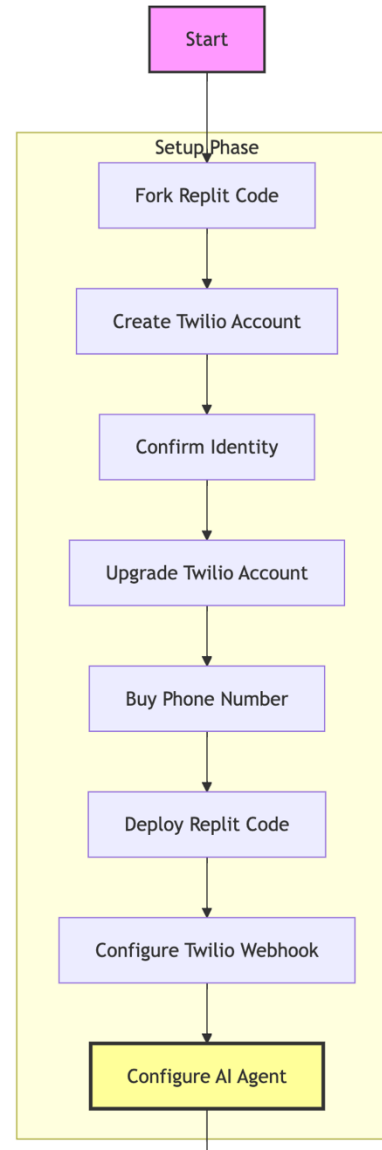

ME: I just need you to

- **click buttons**
- **pay for Twilio**
- **get/fund an OpenAI key**
