

Big Picture

100,000ft Comparison

Feature	Perplexity Spaces 	Custom GPTs 
Threads 	Organized by topics 	Individual GPTs for tasks 
Files 	50 files, 25MB limit 	Unlimited files, forever 
Search 	Web + Files, real-time 	User-defined search 
Collaboration 	Team sharing 	Share assistants 
Customization 	Basic models (e.g., GPT-4) 	Highly tailored personas 

Perplexity Spaces (big picture)

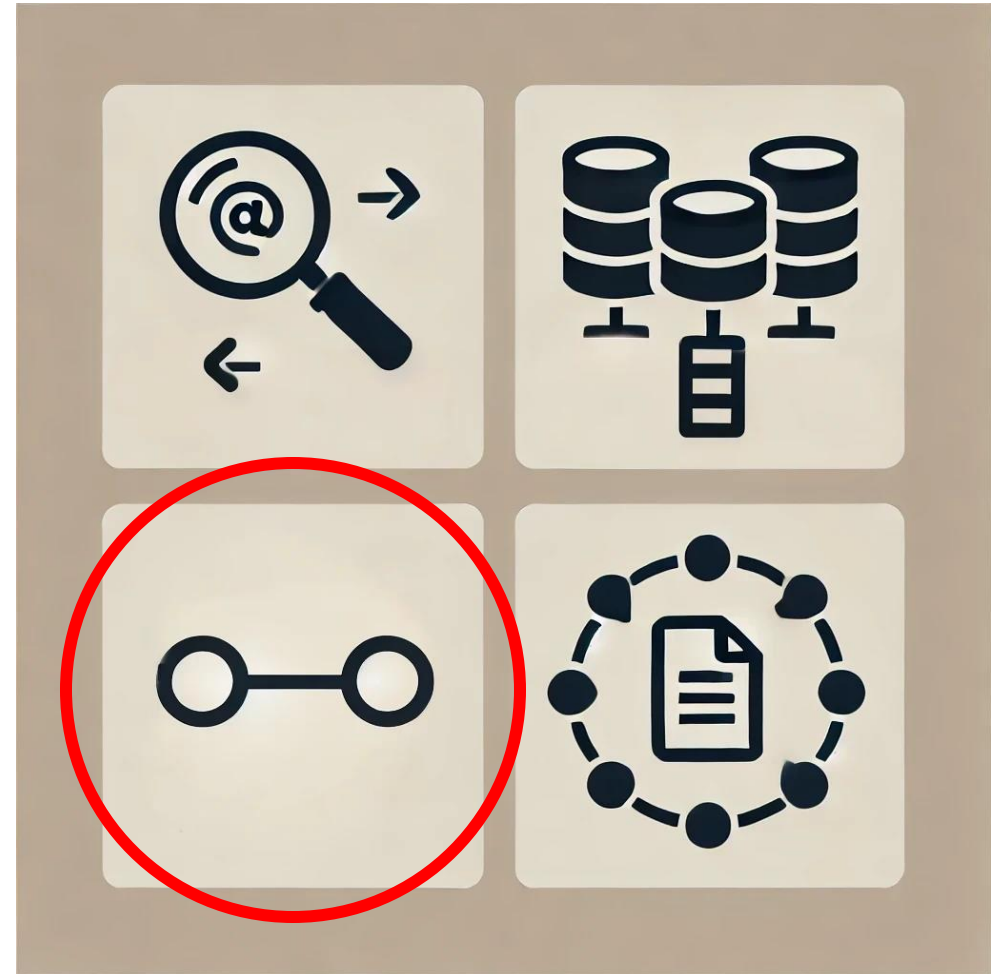

perplexity

Perplexity Spaces (use cases)

Use Case	Details
rfp writing & research	create spaces for rfp projects, upload past proposals, compare vendors with web + file search, summarize findings, and enable team collaboration.
collaborative market research	gather competitor and consumer insights, upload reports and product data, perform web + file searches, and generate summaries for team discussions.
organizing academic projects	create spaces for subjects or projects, upload research papers with summaries, collaborate on notes, and perform real-time searches for references.
team-based knowledge sharing	organize documents and notes, upload up to 50 files per space, generate summaries and titles, and align teams with web + file search.
researching youtube videos	search and explore topics through embedded youtube integration, organize insights into spaces, generate summaries, and collaborate on key findings.

Custom GPTs (big picture)

Custom GPTs (use cases)

Use Case	Details
automated customer support	build chatbots to handle inquiries, connect to crm for real-time responses, trigger workflows, and escalate issues to human agents as needed.
dynamic proposal generation	create custom proposals on-demand, pull data from apis, auto-generate pdfs, and send them directly to prospects via email.
personalized virtual assistant	build assistants that manage schedules, set reminders, follow up via email, and integrate seamlessly with calendar systems.
mermaid diagram creator	generate complex mermaid diagrams based on user input, visualize workflows, export diagrams as images or markdown, and send them via email or slack.
humanized ai text generation	create highly natural-sounding text tailored for blogs, emails, or marketing campaigns, adjust tone and style dynamically, and automate delivery based on triggers.
